recepyuksel.vercel.app

I hold a degree in Management Information Systems. I combine my knowledge of management with software development processes. I develop full-stack projects using modern technologies such as React, Next.js, NestJS, Node.js, and PostgreSQL, while also working on artificial intelligence solutions with Python and OpenCV. I focus on analyzing business processes and solving complex problems with the right technology stack to add value to the organization I work for.

EXPERIENCE

Present
January 2026 | **Full Stack Developer Intern, Morphosium Software and Hardware Services, Turkey**
Actively contributing to software development processes using React, Next.js, Node.js, NestJS, PostgreSQL, Git, and Docker.

React Next.js Node.js NestJS PostgreSQL Git Docker

EDUCATION & CERTIFICATES

Burdur Mehmet Akif Ersoy University
Bachelor of Management Information Systems, 2022 – 2026
Graduated

Akbank
Akbank Generative AI Bootcamp, 2025

PROJECTS

Dongu - Community-Based Circular Sharing Platform 2025

github.com/recepyuksel/Dongu-app

A full-stack sharing platform that enables unused items to be recirculated within the community. Features include donation, trade, and need listing flows, Socket.IO-based real-time messaging, notification system, community management, leaderboard/scoring system, and advanced filtering capabilities.

React NestJS PostgreSQL Redis Docker

Digital Watchdog - Smart Surveillance and Security System 2025

github.com/recepyuksel/DijitalGozcu-Python-Core

A security automation system that identifies faces as 128-dimensional vectors using Dlib-based deep learning models and provides system-level audio alerts via macOS afplay integration upon suspicious detections. A platform that dynamically calculates the duration of wanted individuals in the system (Year/Month/Day) through a JSON-based central database and offers interactive data access via a Tkinter interface.

Python Dlib OpenCV Tkinter Pandas JSON Pyttsx3 macOS System Integration

Chatbot Project (RAG + LLM) 2025

github.com/recepyuksel/chatbot-project

Designed and developed a RAG chatbot that provides precise and context-aware calorie information for various fruits using large language models (LLMs). Enhanced user interaction through custom data sources.

Python LLM RAG ChromaDB NLP Chatbot

SKILLS

Programming Languages: TypeScript, JavaScript, Python, SQL, C#

Web Development: React, Next.js, Node.js, NestJS, Tailwind CSS, .NET

Mobile Development: React Native

Database Management: PostgreSQL, TypeORM, MS SQL Server

Languages: Turkish (Native), English (A2 - Technical documentation)
